- Inequality
 - In China
 - in Europe
- Trade
 - In China
 - In Europe
- Inequality and trade in China
- Very tentative conclusions

2

motivation

3

One Belt One Road

- (aka BRI) is a peaceful economic development strategy in the new century proposed by China
- for China and participating countries this is a huge opportunity for economic development
- The five principles of a peaceful coexistence are: to respect the sovereignty and territorial integrity of all countries, mutual non aggression, non-interference in the internal affairs of each other, peaceful coexistence, equality and mutual benefit.

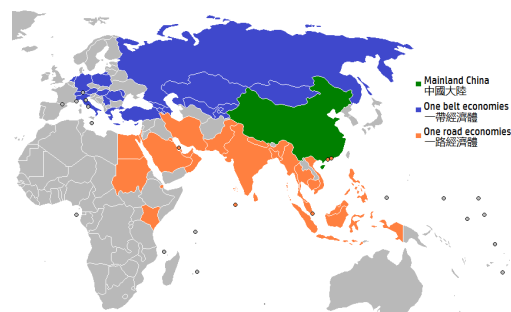

4

One Belt One Road

- in 2013 president Xi Jinping proposed
 - a “Silk Road Economic Belt” and
 - a “21st-Century Maritime Silk Road”
- A domestic as well as an external programme
 - several Chinese provinces are involved
 - several Asian, European and African countries are also involved
- It certainly is a very long term project starting at present but launched into a far future

5

The OBOR economies

6

Wide-angle infrastructures

- Railways (belt)
- Maritime (road)
- Airlines
- Digital
- Oil & gas pipeline

One Belt One Road

- A different name for quite an old story
- European and Chinese trade relationships could be traced back to well before both Europe and China, as we know them now, existed
- To what extent are we now facing a new impulse (and what kind of impulse is it)?
- What opinion do we have about it?

Trans-Asia trade routes (1st century CE)

One belt one road initiative

China's Belt and Road Initiative, aims to invest in infrastructure projects including railways and power grids in central, west and southern Asia, as well as Africa and Europe.

Two heterogeneous entities

European Union	China
512.6 million people in 2018 (all Europe nearly 750 million)	1,415 million (estimated 2018) (+ 5528531 last yearly change)
28 member countries (including the UK and excluding 5 applicants)	31 provinces (excluding Taiwan, Macao, HongKong)
• Smallest Malta 0,437 million	• Smallest Tibet 3 million
• Biggest Germany 82 m	• Biggest Guangdong 110 m
GDP	GDP
• 33715\$ current GDPpc 2017	• 8827\$ current GDPpc 2017
• 37204 \$ international PPP (constant 2011)	• 15309\$ international PPP (constant 2011)

Sources: Population: EU28 → Eurostat; China → worldometers; GDP → World Bank

Income inequality is a concern for both the EU and China

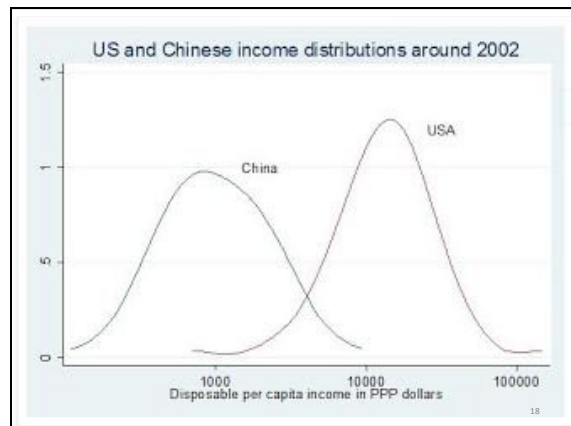

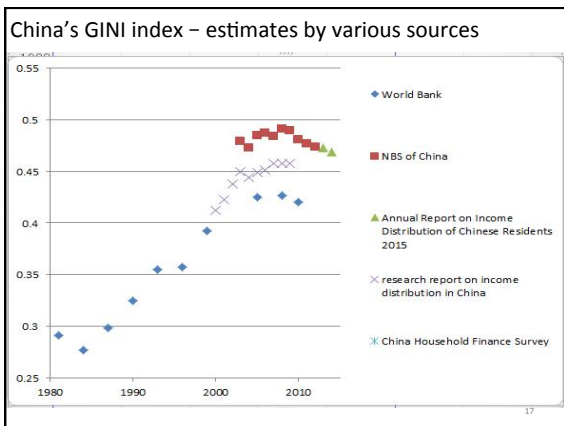

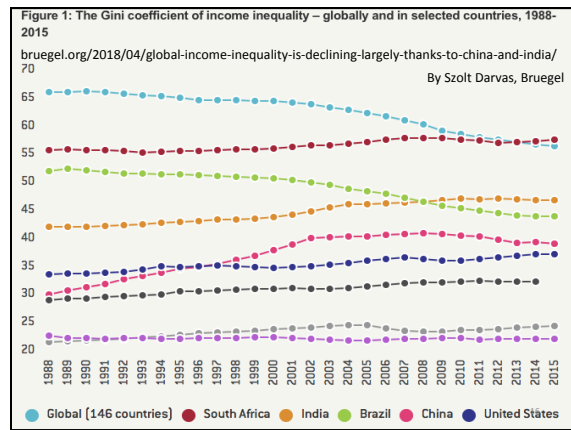

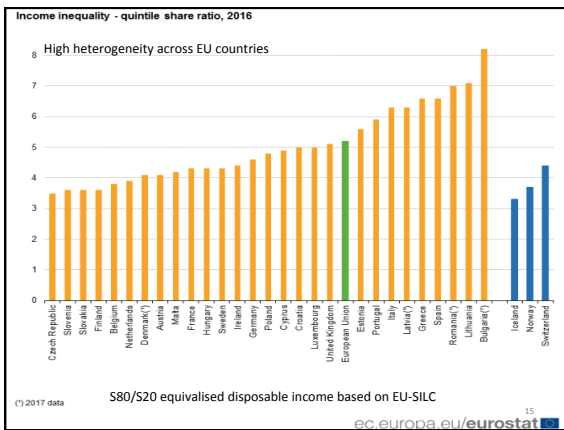

European Union	China
• It seems inequality has peaked over 20 years ago, although the issue has been raised more recently (i.e. after the GFC)	• There is some agreement inequality has peaked in 2008, although various sources either indicate 2012 or argue it could be still increasing (Li Shi, 2018)
• Due to the impoverishment of its middle class, in the "West's decade of despair" many numbers clash with the stories behind	• No doubt income inequality increased 2002-2007
• EU-SILC microdata	• The role of the rich is crucial for evaluating inequality since 2008
	• CHIP microdata

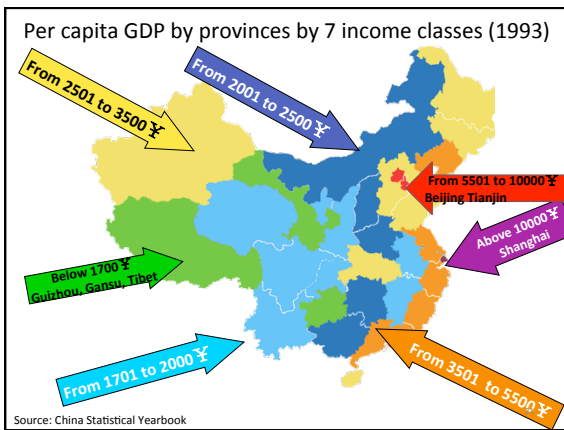

Income data quality, including homogeneous definitions through space and time essential

10						Liaoning		Guangdong Zhejiang		

REGIONAL DISTRIBUTION OF FDI IN CHINA

Infrastructures are more developed than in other parts of the country, too

- Easy access to trade by sea
- “Modern industry” endowment
- Closeness to other areas experiencing rapid growth

Western Regions 12% Eastern Regions 88%

China has officially launched 8 Central European teams

7条货运班列从中国驶向欧洲
China Europe freight transport Direction

注1: 合新欧2014年6月开行, 目前运行区间为合肥至中亚
注2: 本图为线路方向示意, 非实际路线图

33

REGIONAL DISTRIBUTION OF IMPORT/EXPORT (1999)

Import/export is mainly concentrated in coastal areas (90%)

Source: China Statistical Yearbook, 2000

35

China's Exports at the provincial level 1993-2015

Road provinces export more than both non OBOR and Belt provinces.

36

The evolutions

- 1995-2010 complete data for panel
- The values of import and export of all provinces increased rapidly.
- The Gini (within provinces) of all provinces increased slightly.
- The Theil elements (between provinces) changed a little, but five provinces.

Inequality → Import & Export

- $Y_{it} = \alpha_i + \beta_1 X_{1,it} + \beta_2 X_{2,it} + \dots + \beta_m X_{m,it} + \epsilon_{it}$
- $Y \rightarrow$ dependent variables: import, import per capita, import over grp, export, export per capita, export over grp.
- $X_m \rightarrow$ Independent variables: Theil elements, Gini coefficient, GRP, per GRP, population, consumption, railways.
- $\alpha_i (i=1\dots n)$ is the unknown intercept for each entity
- β the coefficient for independent variables and control variables.
- ϵ_{it} the error term.

China's inequality → Import & Export

- Dynamic panel data estimators: GMM estimation (Arellano and Bond, 1991)
- Between provinces: Export, Theil Elements, Per GRP, Consumption.
- Within provinces: Import, Export, Gini, per GRP, GRP, population, railways.

Between provinces

l.export V_pc				0.944*** (0.000)	0.895 (1)	0.944*** (0.000)	0.888*** (0.001)

Notice:***,**and*represent significance value at 1%,5% and 10%, respectively. Standard errors are in parentheses

Findings

- The results are significant at the 99% level, positive for Gini and negative for Theil elements.
- Inequality between provinces measured by Theil elements impacts export, Theil rises and export decreases.
- Inequality of within provinces measured by Gini impacts import and export, Gini increases and import and export increase, too.

49

outline

- Introduction to OBOR
- Inequality
 - In China
 - in Europe
- Trade
 - In China
 - In Europe
- Inequality and trade in China
- **Very tentative conclusions**

50

Very tentative conclusions

- 1. inequality always needs qualifications
- 2. trade is going to face more complex times
- 3. China regards itself as an increasingly major player
- 4. Europe does not regard itself the same
- 5. what role for the US?

51

Thanks for your attention
